

About New Macey...

Since the 1990's New Macey has been manufacturing high voltage Plugs and Receptacles for the mining and rail industries using our patented technology. New Macey supply customers worldwide in a variety of industries including Mining, Transportation and Industrial and we are certified for ISO 9001 QMS. We have implemented lean manufacturing principles that reduce our set up times providing our customers with faster delivery times and lower cost for short runs.

Mining Plugs and Receptacles:

New Macey have been innovative in its production of Plugs and receptacles in the mining industry

by using more modern materials like stainless steel that provide a stronger and lighter product than the traditional brass that its competitors use for these high voltage products.

Rail Plugs and Coupler Systems:

New Macey have designed and created rail coupler systems using its mining technology innovations and created a lightweight rail coupler system that is reliable and extremely

low maintenance considering the harsh conditions in the rail application. The company also have a number of other products used in rail for many years like Shore supplies and our patented breakaway cable connections.

11Kv Couplers and Adaptors:

Our designs have included materials that ensure our products are lightweight and are faster to connect cables to ensuring the installation labour time is as low as possible, providing a quality solution that

is easy to install.

Cable Handling & Mining Equipment:

Through many years servicing the mining industry there has been demand for various mining equipment that New Macey has designed and manufactured a range of equipment used including

Electrical Test Equipment, Mobile Vulcanizing machines and other miscellaneous equipment.

Communications Plugs & Sockets:

New Macey have designed a Kamlock easy connect system to quickly attach the plug and socket and at the same time provide a waterproof solution with our custom resin epoxy to ensure

there is no movement with the connecting pins and internal sockets used in the design. Our stainless steel material used gives you a product with a longer life and saves time in the installation process reducing labour to install.

Cable Glands:

New Macey now produce a complete range of cable glands using Stainless Steel, Nickel Plated Brass and Nylon Polyamide. The product range covers a wide range of cable sizes with the option of providing custom sizes in

addition to our standard product range.

Low Voltage Plugs and Sockets:

New Macey produce a complete range of IP67 rated plugs & sockets with an Ampere range of 16, 32, 63 and 125. This is a comprehensive range of Plugs, Sockets, Combination switches and other accessories with 240V and 415V ranges.

Electrical Switchgear:

Electrical
Switchgear Pty. Ltd.

We have acquired a new company that adds a myriad of products to our offerings which include Pre Lugged

cables, Copper Busbars, Flexible busbars and a range of custom and standard design electrical components. More details on these items are available at www.electricalswitchgear.com.au

Design & Engineering Solutions:

Our in-house design team can handle any drawing/design need you may have from simple profiling drawings (2D), through to more complex 3D designs.

Our In-house Electricians and Engineers have the knowledge and experience to help you solve problems and create solutions for your project or finished product. We deliver your designs and production-ready drawings to our factory in less time, helping to ensure we meet your delivery deadlines.
